THE MYSTERIOUS CROP-CIRCLES APPEARED IN HUNGARY TOO

Since the 60's years on the many places of the world appeared circles and figures of unknown provenance in the crop fields. First in England, then in the USA, Japan, Italy, Canada, and numerous other countries throughout the world. The specialist didn't now to give explanation about the origin of the circles and figures to this moment.

On this summer originated crop-circles in Hungary too, on same places of the country. The first and the biggest circle was found on 21. of June next to Szekesfehervar town on the wheat field of The Aranybulla Farming Share Company by László Ötvös who is a pilot of The Aerocaritas Air Service.

The diameter of the circle was 36 m and the circle was totally regular. In the inside of the circle the wheat stalks fill in the ground spirally, in anti-clockwise rotation. The wheat stalks didn't broke down. The grains of wheat remained in the ear. In the crop-circle wasn't found foot prints of any sort. In the inside of the circle was measured radioactive radiation. The radiation was much bigger than the normal background radiation. On the evening of the circles' origin several of persons from the nearby road-cinema saw unidentified luminous phenomenon over this wheat field.

One day after the discovery of the big circle other circles was found in the wheat field. One circle with 1,7 m diameter and two circles with 1,5 m diameter. After a few days originated any more circles /the diameter of the biggest was 10 m/ and was found a triangle.

Originated circles on other places of Hungary too.

In Döbrentepusztá /next to village Ozora, Tolna County/ was discovered a big circle with 13 m diameter. An unknown force tread down the corn stalks in a regular circle. On the evening before originated the circle Ferenc Kranicz, who is a ranger, saw a red ball in the air, when it has just descended down slowly to the ground.

Next to Tiszaújváros town /Borsod-Abaúj-Zemplén County/ was found a circle with 8 m diameter in a barley field. Outside of the circle was a sign.

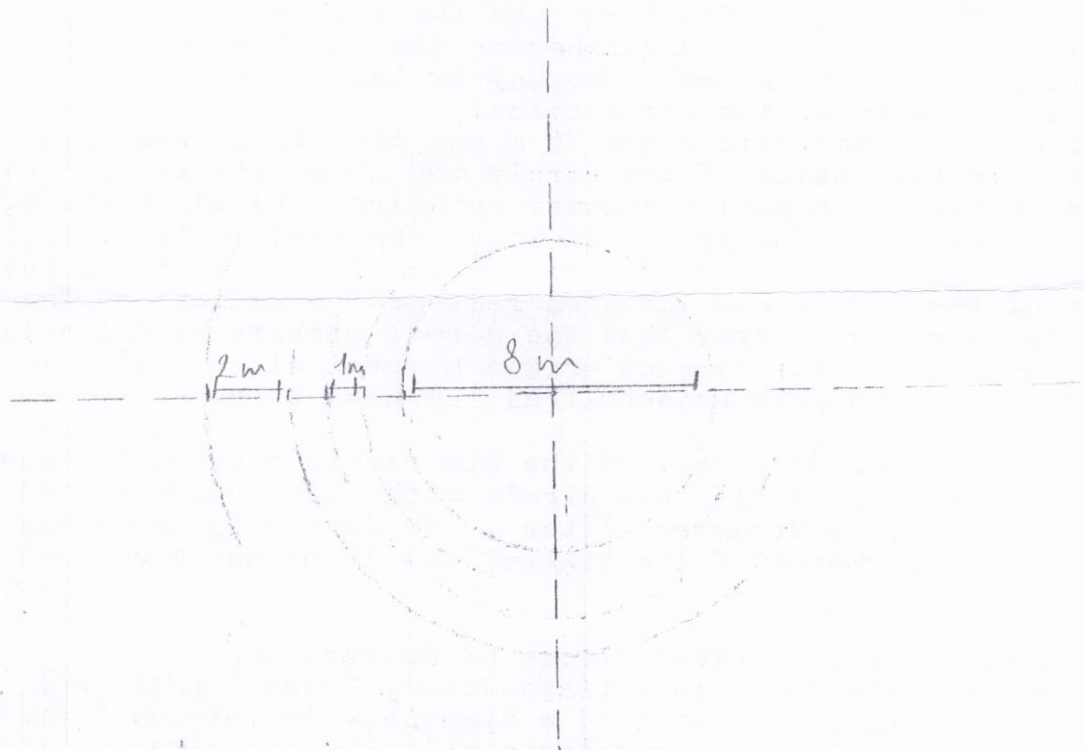

In Mezőszentgyörgy /Fejér County/ was found 3 circles, in Űrgevár /Tolna County/ 6 circles, in Tárkánypusztá /Tolna County/ 8 circles /the diameter of the biggest was 12 m/. In Bicsérd /Baranya County/ was discovered a big circle with 12 m diameter, next to many little circles.

Other places where was found circles also :

- Kisláng, Gárdony, Szabadbattyán, Zichyújfalu, Enying, Kőszárhegy /these willages are in Fejér County/ ,
- Sándorfalva /Csongrád County/ ,
- Hatvan /Heves County/ ,
- Hejőbába /Borsod-Abaúj-Zemplén county/ ,
- Értény /tolna County/ ,
- Jászberény /Jász-Nagykun-szolnok County/ .

We got information from the neighbouring country, Slovakia. Not too far from the hungarian frontier, farming workers found a circle. In Sid, on the field of The Fülekieň Farming Corporation originated this crop-circle, with two outer rings. The diameter of the circle was 8 m andc the width of the outhter rings were 1 and 2 m .

Drawing of the circle and rings :

The cause of the circles'origin is unknown. In many instances before the circles originated was seen unidentified luminous phenomenous by several eyewitnesses.

Starting form this facts we are supposed that the extraterrest-rial beings which visiting our planet continuously could be the causing of the circles.

The scepticals invented many "explanations" but those don't hold one's own.

They supposed that people or animals treaded down the corn stalks. They tried to make such circles, but it didn't manage.

Accordingly another theory the causing was a storm.

An other man said that hedgehogs threw down the corn stalks.

It is a funny assertion.

We can make theories, but the facts refute those.

The facts :

- the geometrical perfection of the circles ,
- the corn stalks didn't broke down ,
- in the circles weren't found foot-prints ,
- in the case of the 36 m diameter circle the extent of the territory / it was 1000 square metres, and if somebody want to round-trample this, he should walk 22 000 km / ,
- the radioactive radiation ,
- the other circles in the many places of Hungary and other countries, and the earlier circles and figures .

These present evidently that the circles couldn't make in know way by people, animals or meteorological phenomenos.

08. december 1992.
